Bark in the Park

BARK'S 25th YEAR!

Oh BOY. OH BOY. Oh BOY!

Twenty seven years ago,...

...five neighbors who regularly met with their dogs in William Street Park conceived the idea of holding a Naglee Park dog festival, hoping to bring together fellow dog owners on a larger scale. After weeks of planning, enticing local vendors, and some advertising, the first Bark Saturday—amazingly and unexpectedly—drew over 3,000 people and 1,000 dogs to the Park. The rest is history.

This year's 2023 celebration marks Bark's 25th anniversary. It remains the Naglee Park Campus Community Association's biggest community event of the year and is recognized as one of the largest dog festivals in the country.

Since 1996, Bark in the Park has been supported primarily by neighborhood volunteers and for many years was managed and produced by Naglee Park's own "Forever Big Dog," Ken Podgorsek, who shepherded Bark from the beginning, laying the foundation for all, to continue building upon today.

Over the years, Bark in the Park has proudly donated over \$200,000 to local pet charities and the greater community. Donations are targeted to local animal causes, educational enrichment in local schools, children's literacy programs, and activities which improve the neighborhood community through resident involvement and events.

Bark in the Park is still produced by Naglee Park volunteers for the enjoyment and benefit of the greater community. We are proud of our neighborhood and its unique history and are grateful for your many years of attendance and support!

How To Calculate Your Dog's Age in Human Years

Multiplying a dog's years by 7, to determine an equivalent human age, is a popular rule but it's not quite that simple.

Here are the American Veterinary Medical Association's General Guidelines:

 **Year One = about 15 human years**

 **Year Two = about 9 human years**

By age 4, the average dog would be roughly 35 in human years.

 **Each + Year = about 5 dog years**

So, by age 10, the average dog is roughly 65.

Of course, each dog is unique and smaller dogs tend to live longer than larger breeds. This formula is only a rough estimate.
